PROFILE

Product designer with 15 years at the intersection of interaction systems, platform products, and monetization, 12 of them at one company across product, system, and brand. I design in code where products live, and build the systems that people and agents compose within. I have led the pivots and the team that scaled the business toward IPO readiness, and I stay a hands-on IC, most effective where craft, systems thinking, and speed compound.

PROFESSIONAL EXPERIENCE

BUZZVIL | SEOUL, SOUTH KOREA · 120+ PERSON AD-TECH PLATFORM (12 YEARS)

Chief Design Officer (CDO) — AI-Native Design & Systems

Sept 2022 – Present

- Built an agent-consumable design system (@buzzvil/design-library) and the composition tooling on top of it, so an agent could assemble a brand-tailored ad campaign and ship it to a live advertiser.
- Encoded design judgment into the system itself, recipes, constraints, and composition rules, so coherence holds across brands and surfaces without a designer on every screen.
- Designed interaction-based ad formats (multi-mission, rewarded), built in code and shipped as server-driven UI; they outperformed standard ads ~3x on click-to-purchase and ~4x on ROAS, with advertiser campaign volume up 28x year over year.
- A hands-on CDO on a close-to-the-work exec team: led a compact design org, owned experience strategy through IPO readiness, and stayed a primary builder in code.

Product Manager & Head of Design — The Strategic Pivot

Jan 2019 – Sept 2022

- Led a company-critical pivot following major platform policy changes, transitioning the business to Offerwall and SDK-based monetization.
- Owned end-to-end product strategy for publisher-facing products, with KPIs centered on monetization performance.
- Designed and shipped server-driven UI capabilities that reduced engineering overhead and accelerated partner integrations.

Head of Design (Member #24) — Growth & Scalability

Nov 2014 – Dec 2018

- Built and scaled the design function from early stage through hypergrowth as one of the company's first employees, into a compact, high-leverage team of six.
- Led the transition from B2C consumer products to B2B SDK offerings, enabling new revenue channels.
- Established shared interaction standards and execution practices to support rapid growth without experience fragmentation.
- Automated creative review workflows, shifting the team from production-heavy work to product innovation.

CMS GROUP (3S INFORMATIQUE) | PARIS, FRANCE (3+ YEARS)

Service & UX Design Lead

Mar 2011 – Apr 2014

- Translated academic research into a commercial SaaS EdTech platform while embedded in a research lab at Arts et Métiers ParisTech.
- Built a systemic UI foundation aligned with production code to improve consistency and delivery speed.
- Co-authored and presented research on co-design validation at IASDR Tokyo.

EDUCATION

- Research Master's in Virtual Engineering & Innovation, Arts et Métiers ParisTech (ENSAM), France
- Master's in Interaction Design (Hypermedia), L'École de Design Nantes Atlantique (EDNA), France

SKILLS & TECHNOLOGIES

- **Core Capabilities**
 - AI-native Design & Systems for Agents
 - Interaction Systems & UX Architecture
 - Product Strategy & Execution
 - Early Product Discovery & De-risking
 - Monetization & Platform Products
 - Scale Readiness
- **Leadership**
 - Cross-functional Leadership
 - Senior IC & Team Enablement
 - Product & Design Hiring
- **Tools & Stack**
 - Design in code: React, TypeScript, Tailwind / CSS, Astro
 - Claude Code, agent-based & MCP workflows
 - Figma, in-code prototyping, design systems & tokens
 - Data-informed experimentation
